Carving a flower - Enlarged images with description of the actions are available at https://coventrywoodcarvers.co.uk/project-flower/

1. Copy the drawing onto wood to draw round	2. Jig- or band-saw to cut out the shape	3. Screw a small block to the back to hold it in the vice	4. Saw down half way to set the petals back from the flower	5. Cut the waste away	6. The two layers of the leaves and flower ready to work on	7. Chisel down around the edge of the petals
8. Cut the waste wood away	9. Use a deep curved tool to pick out the centre of the flower	10. Use a curved tool to shape the petals down to the centre	11. Continue to shape the petals so they form a graceful shape	12. Start to similarly shape the leaves	13. Use a V-tool to start to undercut behind the petals	14. Use the v-tool to define the separate petals
The petals	16. Use a flat tool to further undercut the petals	17. Use a larger tool to cut away waste wood behind the leaves	18. Smooth both the back and front, first with files then sandpaper	19. Use the v-tool to carve the markings	20. The finished flower
